SUSCEPTIBILITY TO PUG DOG ENCEPHALITIS (PDE) REPORT

AMY MCELLEND
3148 PARADISE ACRES
HOOVER, AL 35244

Case: NCD79218
Date Received: 23-Apr-2018
Print Date: 25-Apr-2018
Report ID: 9204-8111-9254-0175
Verify report at www.vgl.ucdavis.edu/myvgl/verify.html

Name: PICKWICK’S PEACHTREE HILL COUNTRY MIGHTY MACINTOSH
DOB: 07/06/2017 Sex: Male Breed: Pug Color: Fawn
Reg: TS 35976001

Sire: GCH HILL COUNTRY LOVIN EVERY MINUTE OF IT
Reg:

Dam: CH PEACHTREE’S KIRKCUDBRIGHT KAYLEIGH
Reg:

Susceptibility to Necrotizing Meningoencephalitis (NME)

Result Codes:

N/N: No copies of the NME associated markers (homozygous for normal). These dogs have a low risk of developing NME.

N/S: One copy of the NME associated marker (heterozygous for susceptibility). These dogs have a low risk of developing NME.

S/S: Two copies of the NME associated marker. These dogs are 12.75 times more likely to develop NME in their lifetime.

Note: This is not a diagnostic test for NME in Pug Dogs or for NME disease or risk in other breeds.

The test determines the risk for developing NME in Pug Dogs and aids in selecting matings that will produce puppies that are at decreased risk (N/N, N/S). Although 11% of Pug Dogs are S/S, only about 1 in 8 of this group will develop NME during their lifetime. Breeding out the S genotype is not advised as this could lead to considerable loss of genetic diversity in the breed. Matings to N/N dogs can be selected that will not produce S/S puppies.
